IMPLEMENTATION CASE STUDY

Launching Two Compliance Platforms at a New School, From Selection to Sustained Adoption

Led an end-to-end software implementation: evaluated and selected the tools, cleaned and migrated the data, trained every user group, took the platforms live and built the system that kept them in use.

Yvette Saucedo, M.Ed. | Implementation lead | Platforms: Embrace IEP and Journify | Fort Worth STEAM Academy

platforms selected and launched	accommodations delivered (233 of 234)	ARD meetings completed in the platform in the first 8 weeks	product feature shipped from my feedback

THE CHALLENGE

A founding public charter school had no special education system at all, and I was the only special education teacher. The school opened earlier than most, while vendors were busy with summer onboarding. The special education caseload grew from about 5 planned students to 27 of 84, and every IEP, 504 plan, service log and accommodation had to be legally accurate from day one, with a TEA review and the first round of testing ahead.

THE ROLLOUT

PHASE 1
Evaluate & select
- Ran vendor demos
- Built a shortlist; pressed vendors on roadmaps
- Recommended Embrace and Journify

PHASE 2
Configure & migrate
- No SIS integration: built the import file by hand for 4 modules (IEP, 504, MTSS, EB)
- As caseloads grew, secured an automated SFTP feed
- Set permissions for legal records

PHASE 3
Train & go live
- Self-trained from vendor videos to start early
- Loom walkthroughs for busy providers
- Trained staff, providers and 504 lead; 89-page manual

PHASE 4
Drive adoption
- Built a 15-step ARD tracker, from due date to parent copy
- Weekly platform checks
- Monthly record audits
- Semester reviews with leaders
- Data-entry standards with corrective action

PHASE 5
Close the loop
- Flagged that teachers had to log accommodations one student at a time
- Journify shipped bulk entry for all users

RESULTS

- **99.6% delivery:** 233 of 234 testing accommodations delivered on interim assessments with zero testing irregularities. The one miss was caught, corrected for the student, and used to retrain all test administrators.
- **Live from day one:** 16 ARD meetings completed in Embrace between August 19 and mid-October, with providers logging services in Journify.
- **Clean data in use:** I audited and standardized a 518-row accommodations export from Journify; the clean file set rosters, staffing, equipment and purchasing for 6 testing rooms.
- **Full adoption:** every staff member and contracted provider (11 staff, 5 providers) trained and working in the platforms; positive TEA review with nothing overdue.
- **Product impact:** my feedback led Journify to add bulk entry, so teachers log used and not-used accommodations for many students at once instead of one by one. Released to every Journify user.

WHAT THIS DEMONSTRATES

Implementation skill	Evidence from this rollout
Product evaluation & selection	Ran demos, compared features and roadmaps, and recommended two platforms
Configuration & data integration	Manual SIS import across 4 modules, then an automated SFTP feed; permissions; cleaned a 518-row Journify export
Scaled training & onboarding	Asynchronous Loom videos plus role-based training, backed by an 89-page manual
Adoption monitoring	Weekly, monthly and semester checks with clear standards and corrective action
Driving customer value	99.6% delivery, a clean compliance review, and feedback that shaped the vendor's product

All figures are group-level counts from my own work. No student names, records or other identifying information are included.
